

Large Integration Test Document

Chapter One: Introduction

This document tests parsing and rendering of a large AsciiDoc file with many features.

Background

The parser must handle documents with hundreds of lines efficiently. This paragraph contains **bold** , *italic* , `monospace` , and *combined* formatting.

Goals

1. Parse correctly
2. Render identical output across TFMs
3. Handle edge cases gracefully

Chapter Two: Lists

Simple Lists

- Item one with **bold**
- Item two with *italic*
- Item three with `code`

Nested Lists

- Top level A
 - Nested A.1
 - Nested A.2
 - Deep A.2.1
- Top level B
 - Nested B.1

Ordered Lists

1. First item
2. Second item
 1. Sub-item 2a

2. Sub-item 2b
3. Third item

Checklists

- Completed task
- Pending task
- Another done

Chapter Three: Tables

Basic Table

Column A	Column B	Column C
Row 1A	Row 1B	Row 1C
Row 2A	Row 2B	Row 2C
Row 3A	Row 3B	Row 3C

Table with Header

Name	Type	Default
timeout	integer	30
retries	integer	3
verbose	boolean	false

Chapter Four: Code

Inline Code

Use the `AdocParser.Parse()` method to parse AsciiDoc.

Code Block

```
csharp
public class Example
{
    public string Name { get; set; }
    public int Value { get; set; }
    public override string ToString()
        => $"{Name}: {Value}";
}
```

Literal Block

```
This preserves
  all whitespace
    including indentation
```

Chapter Five: Admonitions

NOTE:

Remember to check the output.

TIP:

Use diff tools for comparison.

WARNING:

Do not modify golden files manually.

IMPORTANT:

Cross-TFM consistency is critical.

Chapter Six: Links and Images

Visit <https://example.com> for documentation.

See [the docs](#) for more information.

Chapter Seven: Formatting Edge Cases

Adjacent Formatting

bold *italic* `mono`

Formatting Across Words

two words and *two words* and `two words`

Special Characters

Ampersand & less < greater > quote " apostrophe '

Copyright © and trademark ™ and registered ®

Chapter Eight: Sections

Level 3

Level 4

Level 5

Back to content after deep sections.

Chapter Nine: Paragraphs

First paragraph with some text that spans multiple concepts and ideas, providing enough content to test paragraph handling.

Second paragraph immediately following the first, separated by a blank line as per AsciiDoc rules.

Third paragraph. This one is shorter.

Chapter Ten: Conclusion

This concludes the large integration test document. All features above should parse and render consistently across both `netstandard2.0` and `net10.0` targets.

The end.
